RTI Filing Assistant

An AI agent that drafts and files Right to Information requests, with a human approving every filing

Agentic AI Hackathon 2026 | Social Impact and Sustainability AI

Team: Trisha Debnath and Aiseeta Roy
Techno College of Engineering Agartala

The problem: RTI is a right most people cannot use

- Citizens have a legal right to ask government offices for records, but the process is confusing.
- They do not know which public authority holds the record.
- They mix up an RTI request (get information) with a grievance (get a problem fixed).
- Applications are rejected for wrong wording, wrong office, or asking for private data.
- Fee, filing and the 30-day deadline are easy to get wrong.

Our solution: four agent steps, one human approval

1 Collect

Information needed, department, state. Asks if anything is missing.

2 Plan

Is it RTI or a grievance? Which authority? Any private data requested?

3 Find

Looks up the authority on the RTI portal and stores the source.

4 Act

Fills the form and pays Rs 10 only after human approval.

Output: RTI registration number and response deadline (30 days).

How the agent decides, and how we check it

- RTI vs grievance: wants a fix with no request for records goes to the grievance portal.
- Privacy check: personal data of a named person is flagged, not filed (Section 8(1)(j)).
- Authority: matched from the request, stored with its source ID and time.
- Uncertain state: if details or the authority are unclear, it asks instead of guessing.
- Approval gate: shows destination, fee and draft; files only after approval.
- Verification: reads the portal record back and compares it with what was intended.
- Duplicate protection: a retry returns the same RTI number, never a second filing.

Official test cases: all four run in the live demo

Test	Scenario	Expected	Actual result
TC1	Road repair spending	Filed to correct authority	Pass: routed to Public Works Department, RTI number issued
TC2	Wants complaint fixed	Redirected to grievance portal	Pass: redirected, nothing filed
TC3	Third party personal data	Flagged	Pass: flagged for review, not filed
TC4	Rs 10 RTI fee	Approved before filing	Pass: no filing before approval, one filing after

Each run keeps its input, expected result, actual result and evidence in the demo.

Safety and trust by design

- Human approval before any action that cannot be undone (filing and fee).
- Only mock or synthetic data is used; no real personal information.
- No bypassing of OTP or CAPTCHA; a safe manual step is shown instead.
- Failures and uncertain cases are shown openly, never presented as success.
- Every result traces back to its input, source and decision reason.

Live demo and what comes next

Demo: pick a sample, press Draft my RTI, read the decision, approve, and see the RTI number, deadline and portal verification.

Next steps

- Add an LLM to read free-form requests in English, Hindi and Bengali.
- Connect to the real RTI Online portal with a safe manual OTP and CAPTCHA step.
- Track the 30-day deadline and help draft the first appeal.
